TECH STACK

Backend fastapi

Database sqlite

FEATURES

- create todo
- read todo
- update todo
- delete todo

SETUP INSTRUCTIONS

AI-generated · specific to this project

1 Navigate to project folder

```
$ cd C:\Users\Ashwini\autodev-projects\todo_api
```

Open a terminal or command prompt and navigate to the project folder

2 Copy .env.example to .env

```
$ copy .env.example .env
```

Copy the example environment file to a new file named .env and fill in the required values

3 Install dependencies

```
$ pip install -r requirements.txt
```

Install the required dependencies for the project

4 Seed the database

```
$ python database/seed.py
```

Run the seed script to initialize the database

5 Run tests

```
$ pytest
```

Run the tests to ensure the project is working correctly

6 Run the application

```
$ uvicorn main:app --reload
```

Run the FastAPI application with auto-reload

7 Alternative: Run with Docker

```
$ docker-compose up --build
```

Run the application using Docker
